Learning Style: Virtual Classroom

Provider: Red Hat

Difficulty: Intermediate

Course Duration: 5 Days

Red Hat OpenStack Administration I: Core Operations for Domain Operators (CL110VT)

About this course:

Introduction to Red Hat OpenStack Platform and the deployment of virtual cloud servers and applications

Red Hat OpenStack Administration I: Core Operations for Cloud Operators (CL110) is designed for system administrators who are intending to implement a cloud computing environment using OpenStack. You will learn how to configure, use, and maintain Red Hat® OpenStack Platform.

This course is based on Red Hat Enterprise Linux 7.5 and Red Hat OpenStack Platform 13.0.

Course Objective:

The focus of Red Hat OpenStack Administration I: Core Operations for Cloud Operators (CL110) will be managing OpenStack using both the web-based dashboard and the command-line interface, in addition to managing instances and installing a proof-of-concept environment using Red Hat OpenStack Platform (RHOSP) director. Essential skills covered in the course include configuring Red Hat OpenStack Platform (using the director UI); managing users, projects, flavors, roles, images, networking, and block storage; setting quotas; and configuring images at instantiation.

- Launch an instance.
- Manage projects, quotas, and users.
- Manage networks, subnets, routers, and floating IP addresses.
- Create and manage block and object storage in the OpenStack framework.
- Customize instances with cloud-init.
- Deploy scalable stacks.
- Deploy Red Hat OpenStack Platform using RHOSP director.

Audience:

- This course is designed for Linux system administrators, cloud administrators, and cloud operators interested in, or responsible for, maintaining a private or hybrid cloud.

Prerequisite:

- Become a Red Hat Certified System Administrator (RHCSA) or demonstrate equivalent experience

Course Outline:

Introduce launching an instance

- Launch an instance and describe the OpenStack architecture and use cases.

Organize people and resources

- Manage projects, users, roles, and quotas.

Describe cloud computing

- Describe the changes in technology and processes for cloud computing.

Manage Linux networks

- Administer Linux networks and bridges.

Prepare to deploy an instance with public access

- Manage images, flavors, and private networks in preparation for launching an instance.

Deploy an instance

- Launch and verify an instance.

Manage block storage

- Manage ephemeral and persistent block storage.

Manage object storage

- Administer object storage.

Prepare to deploy an external instance

- Manage external networks and security in preparation for launching an instance with public access.

Deploy an instance with public access

- Launch and verify an instance with public access.

Customize instances

- Customize an instance with cloud-init.

Deploy scalable stacks

- Deploy a stack and configure autoscaling.

Install an OpenStack overcloud

- Install an OpenStack proof of concept using the director UI and provisioning service templates.

Lab: Comprehensive review of CL110

- Review tasks in the Red Hat OpenStack Administration I: Core Operations

for Cloud Operators course.

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
