Difficulty: Beginner

Course Duration: 5 Hours

## Ruby Programming Fundamentals

There are some programming languages that require seemingly endless lines of code to make the smallest of programs. There are some languages that are so complex even experts' heads hurt if they try to use them. And then there's Ruby, which has all of the performance of these aforementioned languages and none of the complexity. Productive, powerful, simple and easy to learn, it's the perfect starter language. Oh, and a huge (and growing) number of companies use it too...

## Get Ready for Ruby

- Gain a working knowledge of how to use Ruby
- Understand Ruby programming fundamentals
- Learn the language's syntax, functions and key features
- Complete a challenging practical project after each module

## Understand how Ruby Programming Works

This online course focuses on Ruby fundamentals. Some previous programming experience would be useful for those taking this course, but if you're a complete beginner that's fine too. If you want to get started with Ruby and aren't phased by some challenging hands-on projects, you've picked the perfect course.

We'll walk you through everything you need to know about Ruby, starting at the very beginning with installation. Once installed, you'll get an introduction to the language and start building your very first Ruby app. We'll dedicate sections to data types, conditional flow and loops, classes and methods, learning about the intricacies of each with practical projects. Along the way you'll gain a solid understanding of Ruby's syntax and functions.

By the end of this course you will have a good working knowledge of Ruby and will have already used it in practice. You'll be ready to take a 'deep dive' into the language with further coursework if you wish, or head out into the big bad programming world and start using Ruby for real projects. Whatever you choose to do with your newfound knowledge, you'll have a strong foundation of programming fundamentals to back you up. Plus, you'll have had some fun too!

## About Ruby

Ruby is an object-oriented, general purpose programming language developed by Yukihiro Matsumoto in the 1990s. Designed for increased productivity and fun, it makes a great starter language for new programmers thanks to its simplicity, readability and focus on fun. Commonly used with Rails applications, it's a very popular language that's always in high demand. Companies such as Twitter and Kickstarter use Ruby.

## Course Outline:

Here is the course outline for this course:

- Course Introduction
- Introduction To Ruby
- Data Types
- Operators and Conditional Flow
- Classes and Methods
- Course Conclusion

## Credly Badge:

### **Display your Completion Badge And Get The Recognition You Deserve.**

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
