Learning Style: Virtual Classroom

Provider: Cisco

Difficulty: Intermediate

Course Duration: 2 Days

SD-Access and Catalyst 9K Programmability (SDA9KP)

About this course:

This two-day course covers SD-Access and the Cisco Catalyst 9000 Series switch programming. The student will learn how to create production solutions that run on or interact with IOS-XE on the Catalyst 9000 switches. Students will learn how to

use advanced Cisco tools including DNA Center, APIC-EM, ISE, and Network Data Platform to implement SD-Access. QuickStart recommends students have a working knowledge with Catalyst 9000 Switches, with ideal candidates for this Cisco SDA training course including anyone who is interested in course content, channel partner SEs, network admins, engineers, and architects, and others. See below for additional QuickStart IT training course details!

Course Objective:

Upon completing the course, the learner will be able to meet these overall objectives:

- Describe use cases and examples of the value of Catalyst 9000 programmability
- Use Python to automate the Catalyst 9000
- Use object-oriented programming in Python to abstract Catalyst 9000
- Understand SD-Access
- Apply Cisco Software-Defined Access programmatically

Audience:

The primary audience for this course is as follows:

- Anyone interested in SD-Access and the Catalyst 9000
- Channel Partner SEs and other sales support
- Personnel involved in SD-Access Design and Implementation
- Network Operations team with SD-Access solution
- Network admin staff that deal with Software Defined Networking
- Network Administrators
- Network Architects
- Network Engineers

Prerequisite:

The knowledge and skills that a learner should have before attending this course are as follows:

- Familiarity with Catalyst 9K Switches

Course Outline:

Module 1: SD-Access Overview

- End-to-end segmentation
- Simple, automated work flows
- Open and Programmable APIs
- intelligent network fabric
- Use Cases
 - Security and segmentation

- User mobility
- Guest access
- IoT integration
- Monitoring and troubleshooting
- Cisco Catalyst 9000 Series Programmability
- Components
 - DNA Center
 - Catalyst 9000 Switches
 - APIC-EM
 - ISE
 - Network Data Platform
- Key Integration
 - IP Address Management (IPAM)
 - Network Orchestrators
 - Policy Orchestrators
 - Security Analytics
 - Firewalls
 - Public and Private Cloud Integration
 - IT Services Management (ITSM)

Module 2: Cisco DNA Programming Basics

- IOS XE
- Understanding REST API
- Python and IOS XE
- Cisco Python Module
- Use cases
 - Automated Provisioning
 - Troubleshooting

Module 3: Catalyst 9000 Automation

- NETCONF with SDN controllers
- OpenConfig
- YANG data models
- Guest Shell Linux Containers (LXCs)
- Cisco network plug-and-play
- Zero-touch provisioning
- Python scripting and custom libraries
- Use Cases
 - IT Operations
 - Analytics
 - PCI Compliance

Module 4: Software Defined Networks

- SD-Access
- VXLANs
- MP-BGP EVPN
- Use Case

- Extending Layer to Branch Offices
- Business Continuance

Module 5: APIC-EM

- SD-Access and APIC-EM
- Use Case
 - Network Threat Defense
 - Granular Control
 - Smart Routing
- Catalyst 9000 Integration
- APIC-EM Automation
- APIC-EM APIs

Module 6: Cisco DNA Center to Manage Your Network

- Components
- Benefits
- Automation

Module 7: Cisco SD Access Programming

- Network Fabric
- Cisco SD-Access
- Use Cases
 - Network Deployment
 - End-to-End Segmentation
 - Simple, Automated Workflows
 - Intelligent Network Fabric
- Cisco SD-Access Hardware and Software Platform Requirements
- Centralized Control and Management Plane

Module 8: SD-Access Wireless and WAN Programming

- Visibility of Wireless Traffic for Consistency
- Centralized Control/Management
- Intelligent Services Automation (Application Visibility & Control, EasyQoS)
- Network Embedded Threat/Anomaly Detection and Mitigation
- Intelligent WAN
- Use Cases
 - Accelerate Wireless Deployment
 - Enable Secure Access
 - Deploy branch offices quickly
 - Reduce costs and mitigate risks

Lab Outline

- Lab 1: REST API
- Lab 2: Calling REST APIs from Python
- Lab 3: Programming the Catalyst 9300

- Lab 4: Software Defined Networks on Catalyst 9300
- Lab 5: APIC-EM Automation
- Lab 6: Setup Cisco DNA Center
- Lab 7: Setup Overlay and one Neighborhood
- Lab 8: Moving Users to Cisco SD-Access Fabric
- Lab 9: WAN Migration
- Lab 10: Enable Mobility Services

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
