QuickStart
Over 35 Years Of Technology Training

Document Generated: 12/04/2024

Learning Style: On Demand

Provider:

Difficulty: Beginner

Course Duration:

Jenkins Essentials (LFS267)

About this Course:

The DevOps movement is in full swing, with development and operations teams working jointly on software development projects. This means it is essential for DevOps engineers, quality assurance staff, site reliability engineers and others to be familiar with the available tools for managing continuous integration and

continuous delivery activities. One of the most important CI/CD tools is Jenkins, the open source automation server that provides hundreds of plugins to support building, deploying and automating any project. The Jenkins Essentials training course from The Linux Foundation and Continuous Delivery Foundation prepares you to scale a Jenkins CI/CD server using containerized and cloud-based solutions, use Jenkins multi-branch pipelines to enable pipeline creation at the repository level, and use Infrastructure as Code and GitOps principles with Jenkins. It provides a solid understanding of containerized installation, distributed builds in Kubernetes clusters, advanced security features, multi-branch pipelines concepts.

Course Objectives:

In this course, students will learn how to set up Jenkins in a Kubernetes cluster, automate Jenkins installation using IaC concepts, set up a highly available Jenkins server, scale Jenkins infrastructure by leveraging static and dynamic build agents, automate various routine Jenkins tasks using CLI and RestAPI, organize Jenkins jobs and implement fine-grained security controls, set up effective CI/CD feedback loops, set up complex multi-branch pipelines simulating real-life scenarios, and automate pull request workflow using GitOps principles. After completing this course, students will be able to scale a Jenkins CI/CD server using containerized and cloud-based solutions, use Jenkins multi-branch pipelines to enable pipeline creation at the repository level, and use Infrastructure as Code (IaC) and GitOps principles with Jenkins. These skills will prepare students for SRE, DevOps, and release engineer roles

Audience:

This course is designed for DevOps engineers, Quality Assurance personnel, SREs as well as software developers and architects who want to gain expertise with Jenkins CI/CD. Before enrolling, students should have a basic knowledge of Jenkins and be familiar with Kubernetes and Docker

Prerequisites:

- Basic knowledge of Jenkins – We recommend the Introduction to Jenkins edX course
- Basic knowledge of Kubernetes (pods, namespaces, volumes, Role Based Access Control (RBAC)) – We recommend Introduction to Kubernetes edX course
- Basic knowledge of concepts of building and using Docker images

Course Outline:

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Course Name:
Jenkins Essentials (LFS267)

Add a completion and readiness badge to your Linkedin profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
